

GREEN RESET

Pond Filter

Pressurized pond filter with UVC Lamp

Models
25 - 40

- The external Green Reset pond filter combines the latest in technology and ease of maintenance for perfect water clarity. This pressurized UVC BioFilter is available in two models, Green Reset 25 and Green Reset 40, with great filtration capacity for small and large ponds. The Green Reset can be placed above ground or buried in the landscape. Recommended pumps are the SICCE Master DW and Syncra DW for top performance of this exceptional filter.

- The Green Reset is designed for maximum efficiency. First, water is forced through the sponges for mechanical filtration, and then through the bioballs, for biological filtration. This superior filtration in combination with an effective UVC sterilizer guarantees crystal clear water.

- The distinction of the Green Reset is the patented mechanism for the maintenance operation which can be done by anyone in three easy steps:

- 1- Lift the handle on the top of the cover
- 2- Turn the lateral grip handles to the 'cleaning' position, then the flow selector handle
- 3- Push the big handle down to force water down through the sponges
